

March 27, 1973

in Nebraska where our children, out there in central Nebraska, western Nebraska, can have an industry nearby where they don't have to leave home. Now for every farm family who probably has, say three sons, or three sons and daughters, there is only room for probably say sons, there is only room for one of them to stay. The other two must leave for industry. That's a sociological fact that's been true for several decades. Now where you going to send them, to Omaha and Lincoln, that's where they're going or to some other heavily populated area. There are no jobs out there. There are not enough jobs. I won't say there are no jobs. There aren't enough jobs so let's not cripple the, the process of trying to disseminate our industries out into our clean areas where it's much more healthful to live.

PRESIDENT: Well, if I can find Senator Stahmer. He was next to speak. All right. Senator Stahmer.

SENATOR STAHMER: Mr. President and Members. Very briefly. I commend Senator Schmit for bringing forward this bill and I think it brings us to where we ought to be in the State and where the surrounding states would be more in compliance with what surrounding states are doing and I would urge the body to look with favor on this measure.

PRESIDENT: Senator Syas.

SENATOR SYAS: Well I just want to say briefly a few things. Senator Carpenter brought up a bill about citizens going to court. I put that bill in. It was put in by Senator Proud last year and, of course, the State of Nebraska doesn't want to give the right of a citizen to go to court, obviously, because my bill died in the Environmental Committee in this Legislature. We do handicap the little guy in, relative to doing something about it but we do favor the big fellow and, of course, that, the reason for that is that it all goes right back to the 49 members of this Legislature, I'm sorry to say. This Legislature may--set the council up. It set up the special interests on the--making, makeup of the council. You put all special interests almost on the council. It still exists so what else would you expect, but don't blame someone else. You did it here. I think it was L.B. 929, so let's not blame what they're doing in the environmental control council. You did it with your own votes, knowingly, I hope. Now one other thing. If you don't start doing some of these things, the Federal Government is going to step in and what have I heard for 22 years: Let's not do anything. The Federal Government will do it for us. Then after the Federal Government does it, what happens in this Legislature? Somebody stands up and just says the Federal Government is interfering with State's rights. Well, don't repeal the Wyoming Clause and you'll see what happens. The Federal Government will move in and then you're going to cry, you're going to say look what the Federal Government is doing. They interfere with State rights. If we would just for once bite the bullet as I said yesterday; do what is right, we wouldn't have the Federal Government on our neck so let's go along with Senator Schmit.

PRESIDENT: Do we have an amendment on the desk?

CLERK: Amendment read.

PRESIDENT: Chair recognizes Senator Carpenter.

SENATOR CARPENTER: Mr. President, I move for the adoption of the amendment. I don't really think we can do anything else except what this amendment says. I don't think anybody would believe that we could water down and make less effective what
